” SIMPLY BETTER INSULATED

## How to save energy

Effective thermal insulation is becoming increasingly important due to the sharp rise in energy prices.

Our insulation materials can help you reduce energy consumption in your production processes in two ways.

*Your application*

+

*Our consultation*

=

*The right insulation solution*

### - *Thermal insulation in the pressure-transmitting area*

With effective thermal insulation, you achieve a more even distribution of heat and reduce the energy required for the process.

### - *Thermal insulation on the outer surfaces of equipment and tools*

Convection and radiation cause considerable energy losses. By using our specially developed insulation solutions, these losses can be significantly reduced.

*Benefit from our decades of experience. In a joint discussion and with the help of an energy efficiency and heat transfer calculation, we determine your energy saving potential.*

Every application is different - and the solutions are too!  
A consultation with us is time well spent.
